EDUCATION

Kennesaw State University - Bachelors of Science, Computer Engineering **May 2025**
Coursework | Data Structures & Algorithms, Advanced Embedded Systems, Device Networks, Software Arch & Design, Neural Networks & Machine Learning

TECHNICAL SKILLS

Front End | HTML5, CSS, JavaScript, TypeScript, React, TailwindCSS, styled-components
Back End | Python, Java, Node.js, RESTful APIs, Django, FastAPI, Express.js, PostgreSQL, MySQL, MongoDB, Prisma
Testing/Deployment | Jest, Mocha, AWS:EC2, AWS:IoT Core, Cloudflare, Railway, Supabase
Developer Tools | Linux, Docker, Git, Webpack, Babel, TDD

EXPERIENCE

Software Engineer | TCS **May 2026 - Present**

Full-stack feature development and application enhancement within an Agile delivery team

- Assist in code analysis, maintenance, and enhancement of existing application functionality, ensuring adherence to coding standards and best practices.
- Develop and implement new features and functionalities based on business requirements gathered through client sessions and knowledge transfer workshops.
- Perform impact analysis on change requests and QC tickets, coordinating with senior developers to scope and deliver fixes efficiently within sprint cycles.
- Support unit testing and bug-fixing activities, applying TDD concepts to validate feature correctness before integration.
- Collaborate cross-functionally to resolve issues on time, following Agile processes and contributing to sprint planning, stand-ups, and retrospectives.

PROJECTS

CareConnect (AI-Powered Baby Monitor)

Smart childcare IoT application with AI-powered monitoring Python | C | React Native | TensorFlow | OpenCV | AWS | MQTT

- Developed a CNN-based classification model using TensorFlow and the DonateaCry dataset, achieving 92% accuracy in identifying infant distress states and enabling real-time mobile alerts.
- Integrated facial obstruction and cry detection models, reducing false negatives in infant safety monitoring and ensuring timely alerts for critical events.
- Engineered a cross-platform React Native app with WebRTC live streaming and MQTT notifications, achieving <2s latency for remote monitoring.
- Deployed cloud infrastructure with AWS S3 and AWS IoT Core, enabling scalable data storage, event tracking, and secure mobile access for parents.

Traffic Camera Dashboard

Smart city IoT dashboard for the City of Peachtree Corner, GA JavaScript | Grafana | MQTT | Node-RED | InfluxDB | Jest

- Architected an IoT data pipeline using MQTT and InfluxDB to process analytics for **30,000+** daily vehicles, increasing data ingestion reliability by **25%** across 6 urban locations.
- Engineered a Grafana dashboard to visualize real-time traffic patterns, reducing manual monitoring hours by 15 hours/week for city operations staff.
- Developed rule-based alerts such as detecting roundabout occupancy to flag potential obstructions, and monitoring restroom foot traffic to automatically dispatch janitorial staff when thresholds were reached.
- Designed scalable workflows to integrate multiple IoT data streams, enabling predictive analytics and laying groundwork for AI-driven anomaly detection in urban environments.
